Photographer: Photo Presentation or Video

The Photographer is responsible for a Photo Presentation of your Fair Test. Your Photo Presentation may be in the form of a Slide Show such as Power Point or Slide Share online; or you may compile your pictures into a movie using Windows Movie Maker. You may use other software if you get them approved by the teacher first. I have included two examples: one is a movie and the other is a Power Point slide show.

- The Photo Presentation/Video should include pictures that you took during the Fair Test
- You may use Power Point, SMART Notebook, or an online Slide Show software (examples included in the links on the Process page) for Photo Presentation; or pull photos and information together to form a video using Window Movie Maker, or an online tool
- The Presentation should include all of the information from your Airplanes Log
- The information should be organized in a logical manner
- Should include a reflection comparing your data with your hypothesis and a statement about which Airplanes you recommend to the Committee
- Include visuals: colors, pictures, photos, drawings, charts, tables, etc.
